This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A heat tracer experiment is performed to image the hydraulic conductivity.
- Hamiltonian Monte Carlo algorithm is implemented to invert the temperature data.
- Karhunen-Loève parameterization is used to reduce the computational effort.
