This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A risk-based framework is proposed for water resource management under uncertainty.
- The framework shows how uncertain conditions suppress or intensify risk in system.
- The framework enables choosing policies that minimize risk in system performance.
- The single and joint impacts of uncertain conditions on risk in system are complex.
