Terrain-driven unstructured mesh development through semi-automatic vertical feature extraction

Matthew V. Bilskie, David Coggin, Scott C. Hagen, Stephen C. Medeiros

PII: S0309-1708(15)00227-4
DOI: [10.1016/j.advwatres.2015.09.020](https://doi.org/10.1016/j.advwatres.2015.09.020)
Reference: ADWR 2472

To appear in: *Advances in Water Resources*

Received date: 14 August 2014
Revised date: 22 September 2015
Accepted date: 23 September 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An automated method to extract terrain features from a digital elevation model is discussed
- Including terrain features enhances the description of the natural floodplain physics
- Additional verification techniques are necessary to validation inundation extent
