A Conservative Finite Volume Scheme with Time-Accurate Local Time Stepping for Scalar Transport on Unstructured Grids

J.Rafael Cavalcanti, Michael Dumbser, David da Motta-Marques, Carlos Ruberto Fragoso Junior

PII: S0309-1708(15)00239-0
DOI: [10.1016/j.advwatres.2015.10.002](https://doi.org/10.1016/j.advwatres.2015.10.002)
Reference: ADWR 2484

To appear in: *Advances in Water Resources*

Received date: 3 March 2015
Revised date: 13 September 2015
Accepted date: 9 October 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- new, efficient conservative TVD finite volume scheme for scalar transport
- fully asynchronous time-accurate local time stepping
- element-local CFL stability condition
- small elements do no longer restrict the time step of large elements
- CPU time reduction of up to **one order of magnitude** for water quality simulations
- coupling of the scalar transport model with a semi-implicit model for hydrodynamics
- well suited for the study of river-lake systems or river-ocean interfaces
