This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A particle batch smoother (PBS) is derived from the standard particle filter.
- The PBS is used to determine soil moisture profile by assimilating soil temperature.
- The PBS outperforms the standard particle filter with similar computational cost.
- The PBS provides a valuable tool to determine soil moisture from DTS.
