

## Accepted Manuscript

Title: Strategies for water preparation in a biofloc system:  
Effects of carbon source and fertilization dose on water  
quality and shrimp performance

Author: Felipe Gomes Vilani Rodrigo Schweitzer Rafael da  
Fonseca Arantes Felipe do Nascimento Vieira Carlos Manoel  
do Espírito Santo Walter Quadros Seiffert

PII: S0144-8609(15)30028-5  
DOI: <http://dx.doi.org/doi:10.1016/j.aquaeng.2016.06.002>  
Reference: AQUE 1850

To appear in: *Aquacultural Engineering*

Received date: 11-11-2015  
Revised date: 27-4-2016  
Accepted date: 3-6-2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Rice bran is suitable for water fertilization in a biofloc system.
- The use of rice bran as carbon source positively affected the shrimp performance.
- The rice bran avoid the formation of high levels of ammonia.
