Title: Qualitative and quantitative demonstration of bead-to-bead transfer with bone marrow-derived human mesenchymal stem cells on microcarriers: utilising the phenomenon to improve culture performance

Authors: Qasim A. Rafiq, Steven Ruck, Mariana P. Hanga, Thomas R.J. Heathman, Karen Coopman, Alvin W. Nienow, David J. Williams, Christopher J. Hewitt

PII: S1369-703X(17)30312-1
DOI: <https://doi.org/10.1016/j.bej.2017.11.005>
Reference: BEJ 6818

To appear in: *Biochemical Engineering Journal*

Received date: 26-6-2017
Revised date: 11-10-2017
Accepted date: 15-11-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Qualitative and quantitative demonstration of bead-to-bead transfer with bone marrow-derived human mesenchymal stem cells on microcarriers: utilising the phenomenon to improve culture performance

Highlights

- Qualitative & quantitative demonstration of bead-to-bead transfer for hMSC microcarrier culture
- The phenomenon is used to significantly improve yield and culture performance
- Reproducible results across 3 different hBM-MSD donors in FBS, HPL and serum-free
