Title: Biological treatment of Olive Mill Wastewater in a Sequencing Batch Reactor

Author: Agostina Chiavola Geneve Farabegoli Federica Antonetti

PII: S1369-703X(14)00026-6
DOI: <http://dx.doi.org/doi:10.1016/j.bej.2014.02.004>
Reference: BEJ 5888

To appear in: *Biochemical Engineering Journal*

Received date: 3-7-2013
Revised date: 14-1-2014
Accepted date: 4-2-2014

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- The biological treatment of OMW in a Sequencing Batch Reactor was studied.
- Removal efficiency remained always high at the different influent loadings.
- Biodegradable substrate was always completely removed before the end of the cycle.
- Biodegradation kinetics appreciably improved after increase of nutrients in the feed.
- Membrane post-treatment allowed to comply with limits for effluent discharge.
