Bone regeneration strategies: engineered scaffolds, bioactive molecules and stem cells Current stage and future perspectives

Antalya Ho-Shui-Ling, Johanna Bolander, Laurence E. Rustom, Amy Wagoner Johnson, Frank P. Luyten, Catherine Picart

PII: S0142-9612(18)30494-0
DOI: 10.1016/j.biomaterials.2018.07.017
Reference: JBMT 18760
To appear in: *Biomaterials*
Received Date: 21 March 2018
Accepted Date: 10 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Bone regeneration strategies: engineered scaffolds, bioactive molecules and stem cells

Current stage and future perspectives

Table of Contents

1. Introduction.....	2
1.1 The need for bone repair.....	2
1.2 Mechanism of bone repair.....	3
1.3. Current strategies to repair bones.....	4
1.4. Important steps in clinical translation.....	4
2. Bone graft substitutes: Optimization of implant design, structure and surface properties	5
2.1. 3D printing to customize the design of patient-specific BGS.....	6
2.2 Novel design of material properties.....	7
2.3 Optimization of surface properties.....	8
3. Bone graft substitutes combined with active biomolecules.....	9
3.1. Growth factors: BMP-2, BMP-7 and PDGF.....	9
3.2. Other growth factors and gene delivery.....	10
3.3. Peptides derived from the extracellular matrix.....	11
3.4. Small molecules as regulators of bone mass: PTH, NELL-1, LIMP-1.....	12
4. Bone graft substitutes and stem cells.....	13
4.1 Cell-based therapies in clinical trials.....	13
4.2. A strategic approach to non-union treatment - the developmental engineering paradigm	14
4.3 Different cell sources for different fracture repairs.....	15
4.4 Fate of implanted cells.....	17
4.5. 3D bioprinting of hydrogels and cells or bioactive molecules.....	18
5. Remaining challenges for an improved clinical efficacy.....	18
5.1. Detailed characterization of the local microenvironment.....	18
5.2. Better understanding the biological mechanisms.....	19
5.3. Better controlling the doses and delivery of bioactive molecules in vivo (in space and time)	19
5.4. Modulating the material/bioactivity couple for each specific clinical application	19
5.5. Future requirements regarding progenitor cell characterization.....	19
6. Conclusions.....	20
