

## Accepted Manuscript

Title: Design, synthesis and evaluation of novel sulfonamides as potential anticancer agents

Authors: Maryna V. Kachaeva, Diana M. Hodyna, Ivan V. Semenyuta, Stepan G. Pilyo, Volodymyr M. Prokopenko, Vasyl V. Kovalishyn, Larysa O. Metelytsia, Volodymyr S. Brovarets

PII: S1476-9271(18)30103-8  
DOI: <https://doi.org/10.1016/j.compbiolchem.2018.04.006>  
Reference: CBAC 6838

To appear in: *Computational Biology and Chemistry*

Received date: 14-2-2018  
Revised date: 5-4-2018  
Accepted date: 8-4-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Graphical abstract

### Highlights

- QSAR modeling was applied to the rational design of novel 1,3-oxazole-based sulfonamides as potential anticancer agents.
- A series of tubuline inhibitors with predicted activity were synthesized and tested for their anticancer activity.
- The high antiproliferative activity against cancer cells was found for compounds **4–9**.
- Molecular Docking of compounds **4–9** to the active colchicine site of tubulin was conducted.
