Title: Exciton states and optical properties of the CP26 photosynthetic protein

Author: Daniil V. Khokhlov Aleksandr S. Belov Vadim V. Eremin

PII: S1476-9271(17)30668-0
DOI: <https://doi.org/doi:10.1016/j.compbiolchem.2017.12.006>
Reference: CBAC 6764

To appear in: *Computational Biology and Chemistry*

Received date: 19-9-2017
Revised date: 5-12-2017
Accepted date: 12-12-2017

Please cite this article as: Daniil V. Khokhlov, Aleksandr S. Belov, Vadim V. Eremin, Exciton states and optical properties of the CP26 photosynthetic protein, *Computational Biology and Chemistry* (2017), <https://doi.org/10.1016/j.compbiolchem.2017.12.006>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The exciton Hamiltonian for the CP26 light-harvesting antenna has been constructed
- Absorption, CD, and LD spectra of the antenna have been simulated
- Possible roles of the chlorophylls within the antenna have been discussed
