

## Accepted Manuscript

Title: Systematic Identification of the Druggable Interactions between Human Protein Kinases and Naturally Occurring Compounds in Endometriosis

Authors: Lai Jiang, Chaoliang Tang, Jie Rao, Qing Xue, Hao Wu, Dabao Wu, Aijun Zhang, Ling Chen, Zhen Shen, Lei Lei

PII: S1476-9271(17)30639-4  
DOI: <https://doi.org/10.1016/j.combiolchem.2017.10.006>  
Reference: CBAC 6743

To appear in: *Computational Biology and Chemistry*

Received date: 8-9-2017  
Revised date: 8-10-2017  
Accepted date: 14-10-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# Systematic Identification of the Druggable Interactions between Human Protein Kinases and Naturally Occurring Compounds in Endometriosis

## Graphical abstract

## Highlights

- A systematic kinase–inhibitor interaction profile is created for endometriosis.
- The kinases are curated via gene ontology terms enriched from the gene co-citation network.
- The JNK kinase is identified as a putative candidate of druggable target for EM therapeutics.
- Several naturally occurring compounds are found to have potential inhibitory activity against JNK.
