Title: Visible-light-enhanced catalytic activity of Ru nanoparticles over carbon modified g-C₃N₄

Authors: Miriam Navlani-García, Priyanka Verma, Yasutaka Kuwahara, Takashi Kamegawa, Kohsuke Mori, Hiromi Yamashita

PII: S1010-6030(17)30921-8
DOI: <http://dx.doi.org/10.1016/j.jphotochem.2017.09.007>
Reference: JPC 10852

To appear in: *Journal of Photochemistry and Photobiology A: Chemistry*

Received date: 29-6-2017
Revised date: 23-8-2017
Accepted date: 3-9-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Visible-light-enhanced catalytic activity of Ru nanoparticles

over carbon modified g-C₃N₄

Graphic Abstract

HIGHLIGHTS

- Carbon/g-C₃N₄ composites with enhanced visible light absorption were synthesized by a simple experimental protocol.
- Carbon incorporation plays a key role in stabilizing small Ru nanoparticles on the composites surface.
