This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Deposition of Pd nanoparticles on TiO₂ using a Pd(acac)₂ precursor for photocatalytic oxidation of CO under UV-LED irradiation

Graphical abstract

Highlights

- TiO₂ supported with Pd nanoparticles completely oxidizes CO at room temperature
- UV irradiation substantially increases CO oxidation rate compared to dark oxidation
- Decomposition of Pd(acac)₂ results in the deposition of Pd⁰ and PdO on TiO₂ surface
