Title: Enhanced visible-light photocatalysis via back-electron transfer from palladium quantum dots to perylene diimide

Authors: Weiqin Wei, Zhen Wei, Di Liu, Yongfa Zhua

PII: S0926-3373(18)30150-4
DOI: <https://doi.org/10.1016/j.apcatb.2018.02.032>
Reference: APCATB 16427

To appear in: *Applied Catalysis B: Environmental*

Received date: 12-1-2018
Revised date: 8-2-2018
Accepted date: 12-2-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

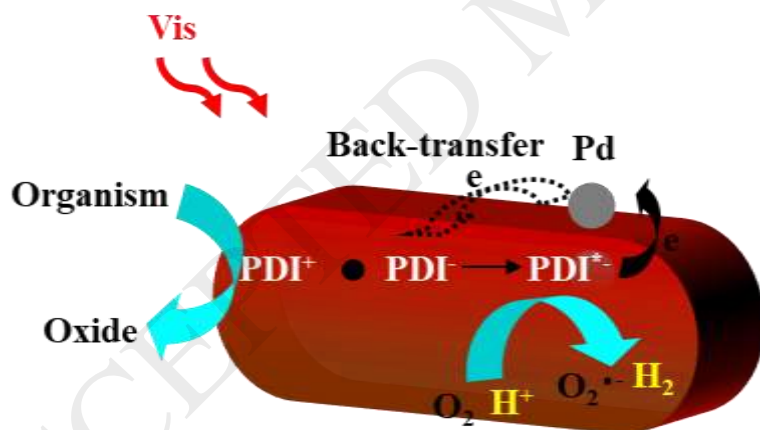

Enhanced Visible-Light Photocatalysis via Back-Electron Transfer from Palladium Quantum Dots to Perylene Diimide

Wei qin Wei^a, Zhen Wei^a, Di Liu^b and Yongfa Zhu^{a*}

GRAPHICAL ABSTRACT

Highlights:

- The complex exhibited much higher photocatalytic activity for dye degradation and hydrogen revolution.
