Lignin depolymerization for phenolic monomers production by sustainable processes

Javier Fernández-Rodríguez , Xabier Erdocia , Cristina Sánchez ,
María González Alriols , Jalel Labidi

PII: S2095-4956(16)30391-6
DOI: [10.1016/j.jechem.2017.02.007](https://doi.org/10.1016/j.jechem.2017.02.007)
Reference: JECHEM 277

To appear in: *Journal of Energy Chemistry*

Received date: 30 November 2016
Revised date: 20 February 2017
Accepted date: 21 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Thermochemical depolymerization of lignins by base catalyzed reaction.
- Organosolv lignins gived higher yield of phenolic enriched oil.
- Almond shell presented higher yield of monomers than olive tree pruning.
