Preparation and enhanced photocatalytic performance of a novel photocatalyst:
Hollow network Fe₃O₄/ mesoporous SiO₂/TiO₂ (FST) composite microspheres

Qun-Yan Li, Kai-Rui Ma, Zi-Jun Ma, Qi Wei, Jun-Guo Liu, Su-Ping Cui, Zuo-Ren Nie

PII: S1387-1811(17)30793-X

DOI: [10.1016/j.micromeso.2017.12.012](https://doi.org/10.1016/j.micromeso.2017.12.012)

Reference: MICMAT 8701

To appear in: *Microporous and Mesoporous Materials*

Received Date: 2 June 2017

Revised Date: 23 November 2017

Accepted Date: 11 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

While the methyl orange molecules in mesoporous channels were degraded, the more methyl orange molecules in hollow structure would diffuse quickly into the mesoporous channels for further reaction with the TiO₂ nanoparticles in the mesoporous channels.
