This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Self-selection issues pose a challenge for quantifying UGS benefits among residents
- Attempt to conceptualize a quantification of benefits considering endogenous effects
- Modelling of joint locational and socio-economic effects on attitudes and use
- Results suggest a need-based spatial UGS distribution accounting for joint effects
