Fleming: 0000-0002-0626-3851

Highlights

- Digging mammals, such as quenda, contribute to ecosystem services and bushland health.
- We studied quenda presence across the fastest growing Australian regional city.
- Quenda persist in urban bushland reserves, despite proximity to roads and housing.
- Vegetation extent and condition are primary factors correlated with their presence.
- Quenda avoid reserves frequented by people walking dogs.
