This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- Sudanese facial soft tissue thickness varied amid CI I, CI II & CI III malocclusion
- Greatest difference of facial soft tissue thickness between CI II and CI III.
- Significant differences between sexes, males had thicker facial soft tissue.
