This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

1. Vinegar is a clear colorless liquid consisting of 5% acetic acid.
2. Ingesting vinegar is discouraged by medical centers and poison-control centers.
3. Morbidities of vinegar exposure are nonspecific: pungency and bowel fixation.
4. The ingestion of concentrated acetic acid is usually suicidal or accidental.
5. Ingesting vinegar affects pancreas, gut, metabolic acidosis, airway, or death.
