This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Crime scene dogs used to locate seminal fluid and blood in outdoor crime scenes.
- Presumptive tests and DNA-results confirm the dogs findings.
- Swabbing is the preferred method of sampling.
- Sampling stains should be performed within 24-48 hours after a crime.
- Weather conditions, surface and time must be considered when sampling.
