This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Genetic identification of relic with blood stains assigned to Belgian King Albert I
- Identification confirms the official version on the death of King Albert I in 1934
- Authentication of the relic was realised using a genetic genealogy approach
- Publication of the genetic data would lead to privacy concerns for living relatives
- Procedure is proposed towards balancing public research interests & privacy issues
