This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- MemCal supports simulating membrane-based gas separation processes in Aspen HYSYS
- Membrane process configuration is selected following a techno-commercial evaluation
- Area distribution control among the various membrane stages is an optimization mean
- Two stages plus recycle is the optimal scheme for purifying natural gas off its CO_2
