

## Accepted Manuscript

A Biologically-Inspired Approach for Adaptive Control of Advanced Energy Systems

Gaurav Mirlekar , Ghassan Al-Sinbol , Mario Perhinschi ,  
Fernando V. Lima

PII: S0098-1354(18)30678-1  
DOI: [10.1016/j.compchemeng.2018.07.002](https://doi.org/10.1016/j.compchemeng.2018.07.002)  
Reference: CACE 6153

To appear in: *Computers and Chemical Engineering*

Received date: 13 January 2018  
Revised date: 30 May 2018  
Accepted date: 3 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An integrated biomimetic control approach is introduced for advanced energy systems
- In this approach, BIO-CS is employed to generate the baseline control laws
- A neural network-based adaptive component is integrated into the BIO-CS framework
- The integrated approach is illustrated via an IGCC process with carbon capture
