This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- The methodology of self-optimizing control is extended to a class of unconstrained batch systems.
- Dyamic self-optimizing control is posed as a structure-constrained static problem.
- A convex formulation is derived to solve combination matrix of controlled variable.
- Analytic solution for the optimal combination matrix is derived.
