Lee, Iiro Harjunoski, Sigurd Skogestad, Michael Baldea, Christos Georgakis, Integrating operations and control: a perspective and roadmap for future research, *Computers and Chemical Engineering* (2018), doi: [10.1016/j.compchemeng.2018.04.011](https://doi.org/10.1016/j.compchemeng.2018.04.011)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This white paper is a concise perspective based on a session during FIPSE 3, held in Rhodes, Greece, June 20-23, 2016.
- Its aim is to highlight open problems and directions for future research on the integration of control and operations.
- It discusses such problems on control and optimization of plants with frequent transitions, on the integration of scheduling and control, and on the impact of big data on control and operations.
- Case studies on the design and operation of microgrids are also discussed.
