Title: Petroleum Production Optimization – A static or dynamic problem?

Author: Bjarne Foss Brage Rugstad Knudsen Bjarne Grimstad

PII: S0098-1354(17)30354-X

DOI: <https://doi.org/doi:10.1016/j.compchemeng.2017.10.009>

Reference: CACE 5915

To appear in: *Computers and Chemical Engineering*

Received date: 7-4-2017

Revised date: 9-10-2017

Accepted date: 10-10-2017

Please cite this article as: Bjarne Foss, Brage Rugstad Knudsen, Bjarne Grimstad, Petroleum Production Optimization ndash A static or dynamic problem?, *Computers and Chemical Engineering* (2017), <https://doi.org/10.1016/j.compchemeng.2017.10.009>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Paper CACE-D-17-00232 – Highlights

- The paper contributes to an improved understanding of mathematical optimization formulations in petroleum production
- It is shown that many important production optimization problems can be solved by repetitive use of static models while some problems, for instance in shale gas systems, require use of dynamic models
- A generalized disjunctive programming formulation based on a directed graph representation is used
- Two case studies, which involve conventional wells and a shale gas system respectively, are presented
