Analysis of the dynamics of an active control of the surface potential in metal oxide gas sensors

Oscar Monge-Villora, Manuel Dominguez-Pumar, Josep M. Olm

PII: S0098-1354(18)30088-7
DOI: [10.1016/j.compchemeng.2018.02.021](https://doi.org/10.1016/j.compchemeng.2018.02.021)
Reference: CACE 6035

To appear in: *Computers and Chemical Engineering*

Received date: 21 November 2017
Revised date: 15 February 2018
Accepted date: 20 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A sliding mode approach of the sigma-delta control of Surface Potential in MOX gas sensors has been made.
- Constant Surface Potential Operation of MOX gas sensors alters the dynamics of the sensors,
- The stability of the closed and open loop operation is analyzed for two rate equation models (for CO and NO₂)
