This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Open source public domain software freely available to academia and industry
- Wide range of transport and binding models for column liquid chromatography
- Simulation engine applies modern algorithms and software engineering
- Flexible MATLAB interface for setting up and executing scientific workflows
- Practical scripts for model calibration, process optimization, experimental design
