This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 Highlights

- 2 • We delineate the influence of control on optimal production scheduling problems
- 3 • We examine the use of total or individual transition times as value metrics
- 4 • We demonstrate that both metrics are suitable for economic benefit analysis for process
5 control
- 6 • We illustrate the role of closed-loop system nonlinearity on the value of improving control
