Optimal Operation of Parallel Distillation Systems with Multiple Product Grades: An Industrial Case Study

Yingyan Luo , Qi Zhang , Lingyu Zhu , Xi Chen

PII: S0098-1354(18)30019-X
DOI: [10.1016/j.compchemeng.2018.01.009](https://doi.org/10.1016/j.compchemeng.2018.01.009)
Reference: CACE 5998

To appear in: *Computers and Chemical Engineering*

Received date: 14 October 2017
Revised date: 4 January 2018
Accepted date: 14 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Optimized operation of a parallel distillation system with purity specifications
- Derived surrogate models from rigorous models for distillation columns
- Formulated an MILP scheduling model for multiproduct distillation systems
- Applied framework to a real-world industrial fine chemical production system
