This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Thermodynamic Analysis of the Driving Force Approach: Non-reactive systems

Highlights

- A thermodynamic analysis of the driving force approach (F_D) is performed
- Explicit relationship between the F_D and the equilibrium energy is demonstrated
- Thermodynamic analysis is validated for non-reactive ideal and non-ideal mixtures
- The link of the maximum F_D and the separation efficiency concept is shown
