Efficient green phosphorescent organic light-emitting diodes enabled with new and thermally stable carbazole/pyridine derivatives as hosts

Bin Jia, Hong Lian, Tijian Sun, Hongen Guo, Xiaozhe Cheng, Jian Wu, Yi Chen, Qingchen Dong, Jinhai Huang

PII: S0143-7208(18)31319-6

DOI: [10.1016/j.dyepig.2018.06.034](https://doi.org/10.1016/j.dyepig.2018.06.034)

Reference: DYPI 6841

To appear in: *Dyes and Pigments*

Received Date: 12 June 2018

Revised Date: 22 June 2018

Accepted Date: 22 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Graphic abstract

Green PhOLED with power efficiency as high as 50.4 lm/W was achieved by using carbazole/pyridine/dibenzofuran derivative as host.
