Molecular engineering of rhodanine dyes for highly efficient D- π -A organic sensitizer

Ranran Li, Liqing Xie, Haijing Feng, Bo Liu

PII: S0143-7208(17)32475-0

DOI: [10.1016/j.dyepig.2018.03.072](https://doi.org/10.1016/j.dyepig.2018.03.072)

Reference: DYPI 6657

To appear in: *Dyes and Pigments*

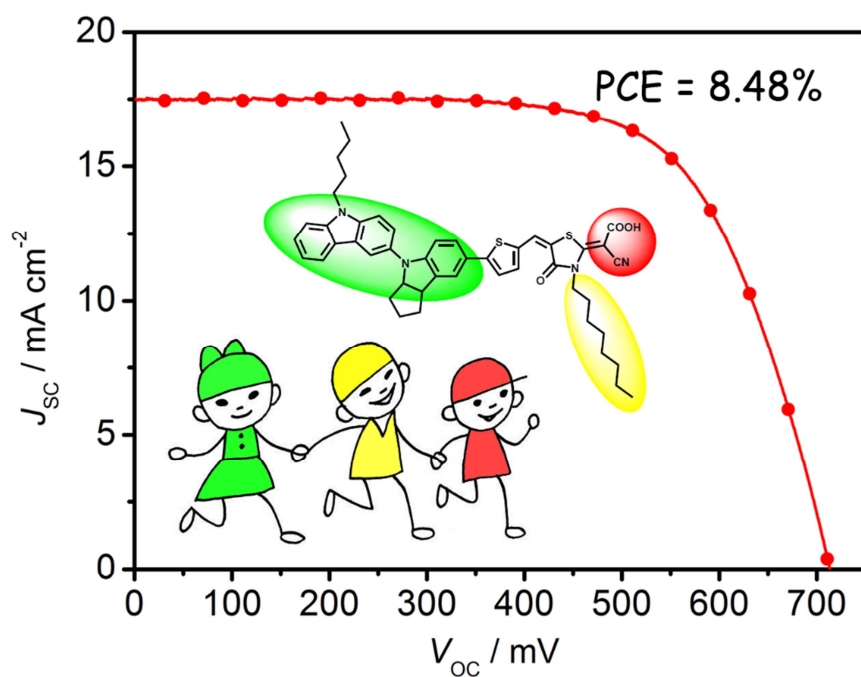

Received Date: 4 December 2017

Revised Date: 26 February 2018

Accepted Date: 29 March 2018

Please cite this article as: Li R, Xie L, Feng H, Liu B, Molecular engineering of rhodanine dyes for highly efficient D- π -A organic sensitizer, *Dyes and Pigments* (2018), doi: 10.1016/j.dyepig.2018.03.072.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The modified rhodanine acceptor with long alkyl chain is greatly favorable to efficient interfacial electron transfer, providing a powerful strategy for the development of rhodanine based highly efficient D- π -A organic sensitizer in the future.
