New frog-type Dibenzo[a,c][1,2,5]thiadiazolo[3,4-*l*]phenazine heterocyclic derivatives with aggregation-enhanced one- and two-photon excitation NIR fluorescence

Yuansheng Lu, Qikun Sun, Zhenzhen Zhang, Liangliang Tang, Xin Shen, Shanfeng Xue, Wenjun Yang

PII: S0143-7208(18)30142-6

DOI: [10.1016/j.dyepig.2018.02.021](https://doi.org/10.1016/j.dyepig.2018.02.021)

Reference: DYPI 6552

To appear in: *Dyes and Pigments*

Received Date: 21 January 2018

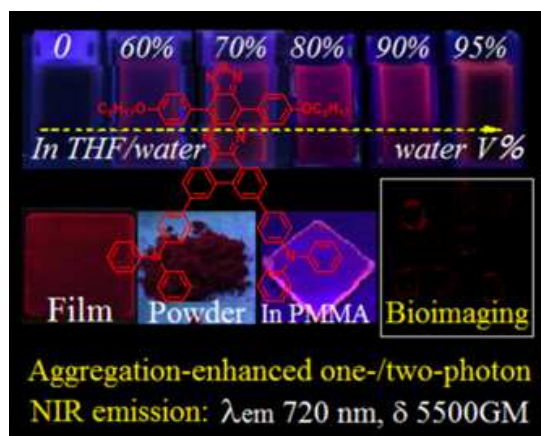

Revised Date: 8 February 2018

Accepted Date: 12 February 2018

Please cite this article as: Lu Y, Sun Q, Zhang Z, Tang L, Shen X, Xue S, Yang W, New frog-type Dibenzo[a,c][1,2,5]thiadiazolo[3,4-*l*]phenazine heterocyclic derivatives with aggregation-enhanced one- and two-photon excitation NIR fluorescence, *Dyes and Pigments* (2018), doi: 10.1016/j.dyepig.2018.02.021.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical abstract

A fused heterocycle is designed as AIE one- and two-photon NIR emitter through manipulating the linking positions of functional groups
