3D MoS₂-rGO@Mo nanohybrids for enhanced hydrogen evolution: The importance of the synergy on the Volmer reaction

Binhong He, Liang Chen, Mingjun Jing, Minjie Zhou, Zhaohui Hou, Xiaobo Chen

PII: S0013-4686(18)31456-7

DOI: [10.1016/j.electacta.2018.06.168](https://doi.org/10.1016/j.electacta.2018.06.168)

Reference: EA 32161

To appear in: *Electrochimica Acta*

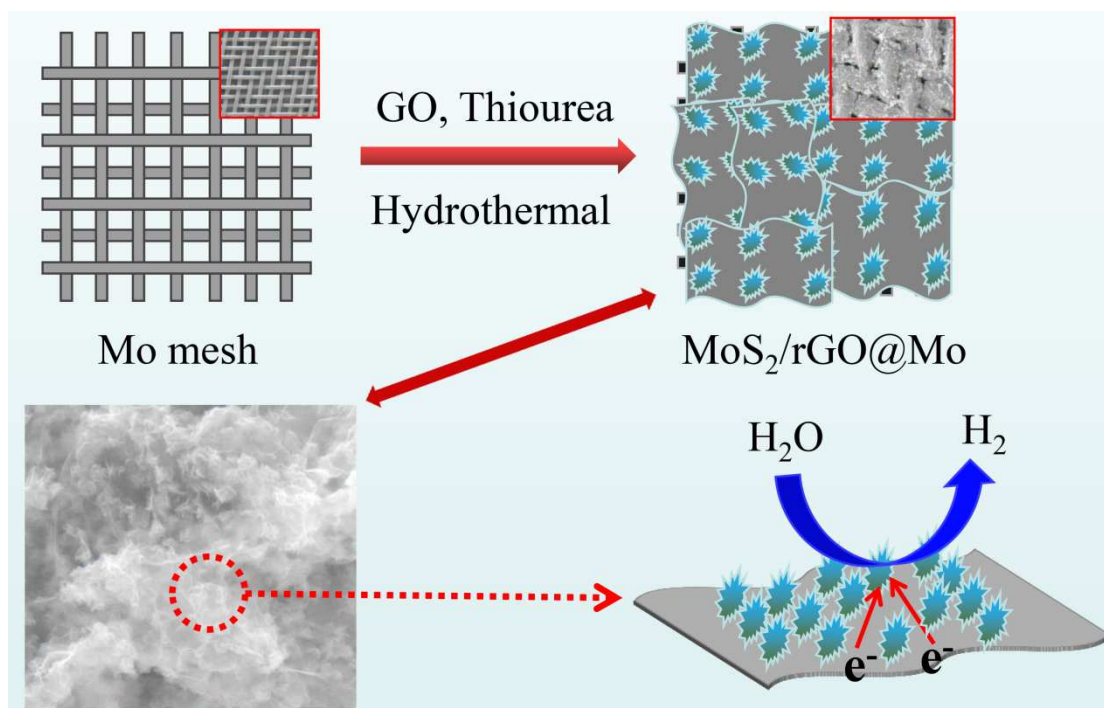

Received Date: 19 September 2017

Revised Date: 30 May 2018

Accepted Date: 25 June 2018

Please cite this article as: B. He, L. Chen, M. Jing, M. Zhou, Z. Hou, X. Chen, 3D MoS₂-rGO@Mo nanohybrids for enhanced hydrogen evolution: The importance of the synergy on the Volmer reaction, *Electrochimica Acta* (2018), doi: 10.1016/j.electacta.2018.06.168.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

3D $\text{MoS}_2/\text{rGO}@/\text{Mo}$ catalyst was fabricated by a simple one-pot hydrothermal process, which exhibits excellent HER performance in alkaline solution.
