Nanostar morphology of plasmonic particles strongly enhances photoelectrochemical water splitting of TiO₂ nanorods with superior incident photon-to-current conversion efficiency in visible/near-infrared region

Lingyun Wang, Yu Wang, Patrik Schmuki, Stepan Kment, Radek Zboril

PII: S0013-4686(17)32467-2

DOI: [10.1016/j.electacta.2017.11.106](https://doi.org/10.1016/j.electacta.2017.11.106)

Reference: EA 30696

To appear in: *Electrochimica Acta*

Received Date: 30 March 2017

Revised Date: 11 June 2017

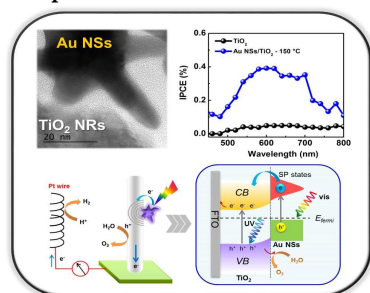

Accepted Date: 15 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
