Title: Self-assembled nickel-cobalt oxide microspheres from rods with enhanced electrochemical performance for sodium ion battery

Authors: Mobinul Islam, Min-Gi Jeong, Jang-Yeon Hwang, In-Hwan Oh, Yang-Kook Sun, Hun-Gi Jung

PII: S0013-4686(17)32236-3
DOI: <https://doi.org/10.1016/j.electacta.2017.10.114>
Reference: EA 30500

To appear in: *Electrochimica Acta*

Received date: 6-8-2017
Revised date: 29-9-2017
Accepted date: 16-10-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Self-assembled nickel-cobalt oxide microspheres from rods with enhanced electrochemical performance for sodium ion battery

Research Highlights

- Self-assembled NiCo₂O₄ microsphere consists of sub-micron sized rods were prepared
- NiCo₂O₄ microspheres have a large specific surface area and multimodal porosity
- Unique structural characteristics of microspheres provide superior performance
