## Graphical Abstract

Layer type perovskite materials ( $A^{I}A^{II}Ti_{2}O_{6}$  ( $A^{I}$  = Na or Ag or Cu;  $A^{II}$  = La)) acts as photocatalysts for degradation and mineralization of various pollutants and industrial wastewater under visible light irradiation.

#### **Research highlights**

- Preparation of new layer type perovskite materials by ion-exchange method.
- Characterization new materials with various spectroscopic techniques.
