3D computational simulation for the prediction of coupled momentum, heat and mass transfer during deep-fat frying of potato strips coated with different concentrations of alginate

Enayat-Allah Naghavi, Jalal Dehghannya, Babak Ghanbarzadeh

PII: S0260-8774(18)30187-0
DOI: 10.1016/j.jfoodeng.2018.04.026
Reference: JFOE 9240
To appear in: *Journal of Food Engineering*
Received Date: 06 October 2017
Revised Date: 07 March 2018
Accepted Date: 28 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **3D computational simulation for the prediction of coupled momentum, heat**
2 **and mass transfer during deep-fat frying of potato strips coated with different**
3 **concentrations of alginate**
