This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Use of Aerosil flow aid enhanced barley protein separation in air classification.
- Protein enrichment up to 28.3% was achieved with 21.7% PSE.
- Alternatively, PSE of 59.4% was obtained with protein content of 22.3%.
- Protein formed aggregates containing small starch granules embedded.
