Accepted Manuscript

Prediction of Firmness Parameters of Tomatoes by Portable Visible and Near-Infrared Spectroscopy

Yuping Huang, Renfu Lu, Kunjie Chen

PII: S0260-8774(17)30505-8

DOI: 10.1016/j.jfoodeng.2017.11.030

Reference: JFOE 9090

To appear in: Journal of Food Engineering

Received Date: 11 July 2017

Revised Date: 08 October 2017

Accepted Date: 21 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

Firmness of tomatoes were measured by four destructive and nondestructive techniques Interactance spectra were acquired using two portable Vis/SWNIR and NIR spectrometers Vis/SWNIR interactance spectra were superior to NIR for firmness prediction
