Measurement of liquid-vapor phase distribution on nano- and microstructured boiling surfaces

Youngjae Park , Hyungmo Kim , Joonwon Kim , Hyungdae Kim

PII: S0301-9322(15)30018-5
DOI: [10.1016/j.ijmultiphaseflow.2016.01.007](https://doi.org/10.1016/j.ijmultiphaseflow.2016.01.007)
Reference: IJMF 2330

To appear in: *International Journal of Multiphase Flow*

Received date: 30 August 2015
Accepted date: 22 January 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Visualization of liquid-vapor phase distribution on structured boiling surfaces.
- Measurement of fundamental boiling parameters at the level of individual bubbles.
- Examination of nano/micro-scaled surface structure effects on boiling mechanisms.
