This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Review Article

Electrochemical performances of lithium and sodium ion batteries based on carbon materials

Graphical abstract

A SIB has a low capacity. Therefore, in order to increase their capacity, interlayer spacing of the carbon-based anode material is widened to facilitate intercalation of sodium ions, and
