Effect of particle shape on bubble-particle attachment angle and flotation behavior of glass beads and fragments

Wencheng Xia, Guangxi Ma, Xiangning Bu, Yaoli Peng

PII: S0032-5910(18)30522-9  
DOI: [doi:10.1016/j.powtec.2018.07.024](https://doi.org/10.1016/j.powtec.2018.07.024)  
Reference: PTEC 13506  
To appear in: *Powder Technology*  
Received date: 19 April 2018  
Revised date: 8 June 2018  
Accepted date: 5 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Effect of particle shape on bubble-particle attachment angle and  
flotation behavior of glass beads and fragments

Wencheng Xia\*, Guangxi Ma\*, Xiangning Bu, Yaoli Peng

Key Laboratory of Coal Processing and Efficient Utilization of Ministry of Education,  
School of Chemical Engineering and Technology, China University of Mining and  
Technology, Xuzhou 221116, Jiangsu, China.
