This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The study performs a field investigation in a square in Rome, Italy, during summer
- It focuses on daily shading patterns, attendance and thermal comfort
- Most of the visitors sought shaded locations when sitting
- This preference was strongly correlated with thermal comfort analysis
- PET index values were significantly lower in shaded areas
