Dynamic fracture analysis of functionally graded materials under thermal shock loading by using the radial integration boundary element method

Baojing Zheng, Yang Yang, Xiaowei Gao, Ch. Zhang

PII: S0263-8223(17)33969-7
DOI: <https://doi.org/10.1016/j.compstruct.2018.06.050>
Reference: COST 9844

To appear in: *Composite Structures*

Received Date: 27 November 2017

Revised Date: 9 June 2018

Accepted Date: 15 June 2018

Please cite this article as: Zheng, B., Yang, Y., Gao, X., Zhang, Ch., Dynamic fracture analysis of functionally graded materials under thermal shock loading by using the radial integration boundary element method, *Composite Structures* (2018), doi: <https://doi.org/10.1016/j.compstruct.2018.06.050>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
