This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Cool roofs can improve thermal comfort of low income households near the equator
- Experimental results in Jamaica confirm improvements
- Energy models were developed for Jamaica, Ghana and Recife-Brazil
- Internal ceiling surface temperatures are reduced on average by 3.2 - 5.5 °C

Cooling demand reduction is similar at 190 kWh/m²/year
