This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- Building energy saving advisory developed using data mining framework,
- Monitored energy usage used to discover the correlations, and make recommendations,
- The approach presents an end-to-end solution, from raw energy usage data to feasible recommendations.
- Recommendations are based on the occupants' past behavior, so they are achievable.
